PROFESSIONAL SUMMARY

Aspiring Site Reliability and DevOps Engineer with hands-on experience building and deploying cloud-native applications using AWS, Docker, GitHub Actions, and Linux. Experienced in designing CI/CD pipelines, containerized microservices, infrastructure automation, monitoring, and cloud deployments. Strong foundation in Python, Bash scripting, networking, and system administration with a passion for automation, reliability engineering, observability, and scalable distributed systems.

EDUCATION

B. Tech in Computer Science and Engineering (Artificial Intelligence & Machine Learning) 2023 - 2027

Vignan's Foundation for Science, Technology and Research, Guntur, Andhra Pradesh | CGPA: 7.4

Relevant Coursework: Operating Systems, Computer Networks, Software Engineering, Cloud Computing, System Design

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, ECS, ECR, VPC, IAM, Auto Scaling, Elastic Load Balancer)

DevOps & CI/CD: Docker, Docker Compose, GitHub Actions, Linux Administration, Nginx, Kubernetes (Core concepts)

Automation & Scripting: Bash Scripting, Python, C, YAML

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch, Log Analysis, Platform Monitoring

Databases & Tools: PostgreSQL, Redis, Git, GitHub, FastAPI

PROJECTS

HeartGuard AI | Multi-Service Containerized Medical AI Platform

[GitHub](#)

- Architected and deployed a cloud-native microservices application on AWS EC2 using Docker Compose, integrating FastAPI, React, PostgreSQL, Redis, and a secure VPC-based infrastructure.
- Automated application build, testing, Docker image creation, and deployment using GitHub Actions, improving deployment consistency and reducing manual effort.
- Improved platform reliability and performance by implementing Redis caching, container health management, persistent storage, environment-based configuration, and secure service communication.
- Managed container networking, service orchestration, and infrastructure configuration while following Linux and cloud-native deployment best practices.

Aura Bank | Full-Stack Banking Platform with AI-Powered Risk Engine

[GitHub](#)

- Designed and deployed a containerized microservices application using Docker Compose, integrating Flask services, PostgreSQL, Redis, and AI-powered backend components.
- Automated application build, testing, and deployment using GitHub Actions, enabling consistent and reproducible CI/CD workflows.
- Deployed Prometheus, Grafana, and Node Exporter using Docker Compose to monitor Linux hosts and containerized applications.
- Configured dashboards and alerting for CPU, memory, disk, and container metrics to improve system observability. Automated deployment using GitHub Actions and documented the setup for reproducible environments.

CERTIFICATIONS

AWS Certified Cloud Practitioner: Amazon Web Services (AWS)

Cloud Computing Certification: Elite Tag IIT Kharagpur (NPTEL).

Technical Certifications: Cisco Networking Academy programs across Python, Data Science, and AI.

Communication: Cambridge English PET Certification (Level B1 Vantage).

ACHIEVEMENTS

Open-Source Consistency: Maintained an active GitHub profile with 2000+ contributions over the past year while consistently developing cloud-native and DevOps projects using Docker, GitHub Actions, AWS, and Python.
